# Introduction

FRK wear parts are all purpose consumable items used in addition to a Standard Gas Lens Body set-up.

With a Secondary Replaceable Gauze set in the Nozzle these set-ups have a wider gas envelope for better weld protection and quality results.

Available as Standard Ceramic and High Performance Quartz.

The system allows for a longer stick out of the electrode giving both better access into more difficult to reach joints and improved visibility.

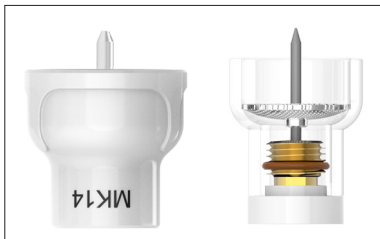

Traditionally used when welding more challenging and exotic materials, the system has now become more widely used as a result of giving the welder a greater degree of flexibility from a single set-up.

The Uniarc FRK series nozzles can be used on all materials and processes (including Pulse with Quartz set-ups) and have a simple and easy to replace front gauze set that pushes into place with a screen installation tool.

## Set-Up Overview

Note:

Maximum Recommended Tungsten for Quartz is 3.2mm

- Max Amps with 1/16"-1.6mm Tungsten 70-150A DC / 60-125A AC
- Max Amps with 3/32"-2.4mm Tungsten 150-250A DC / 120-210A AC
- Max Amps with 1/8"-3.2mm Tungsten 225-330A DC / 150-250A AC

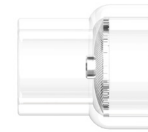

A minimum electrode stick out of 5mm is recommended when using Aluminum processes to prevent clogging of gauze set from weld fume and spatter.
